

Economic ultrafiltration plants for small and medium-sized waterworks

(Spring water preparation: high-level reservoir Michelbach: 30 m³/h)

Especially for small and medium-sized drinking water preparation plants the ultrafiltration process is capable for meeting relevant legal claims at minimum space requirement and low extent of operation.

WAT-membratec[®] located in Erkrath/Germany offers the complete range of performances, beginning from consulting and planning services, through delivery and installation, up to monitoring and maintenance services. Dependent on the individual requirements of each public utility services various automatization and equipment designs can be provided. Investment cost are limited thanks to the modular nature of the design offering spare spaces for future expansion. The arrangement can be realized in various manners and thus adapted to existing buildings, tank chambers etc.

If you contemplate providing your water supply with ultrafiltration – please do not hesitate to ask us!

Our specialist engineers are well prepared to professionally inform you on further details.
